Revised Design

### Improved Back Jogger

**Machine Model for Improvement:** All Joggers

**Description of Improvement:**

This improvement modifies the existing assembly to allow the addition of a variable speed motor. This allows the operator to adjust the desired jogging speed. This speed will be linearly adjusted as a function of line speed. This provides better stack quality by allowing the back jogger to tap the side of the new cartons prior to the mass of the new cartons being too great to tamp and move into proper position.
