Gold Embossing and Blind Embossing Module

Machine Model for Improvement: Possible for all PassPort 2 960-7 machines.

Description of Improvement:

The 2-up covers are automatically taken off from the non-stop feeder. Control of doubles and missing covers is integrated. The station can be configured to only emboss the right or the left side in running direction. Optionally both sides may be embossed.

Blind embossing: The covers are embossed with or without heat. With the blind-embossing it is possible to emboss raised shape or recessed shape. Blind-embossing is made also 2-up with two identical sets of punch and die tools. The opto-electronic eye control must be switched of.

Gold embossing: The foil is reel-fed and wound up after gold-embossing. The temperature is monitored by an electronic temperature control. An opto-electronic eye controls the hot-stamping quality.

Gold Embossing and Blind Embossing Module

Note:

- Also available with Vision System

Included in this TIP:

- All required parts
- Necessary engineering
- Updated documentation pages

Estimated downtime, no production:

- 4 Days

Estimated startup, limited production:

- 3 Days

Estimated monitoring in production:

- 3 Days

Required manpower:

- 2 BW Papersystems Field Service Engineers

(Additional local resources to be determined, if needed)

Installation is not included and will be quoted separately.
