

Heavy Duty Center Box

Upgrade Application

Applicable to Ward belted feeder

Upgrade Description

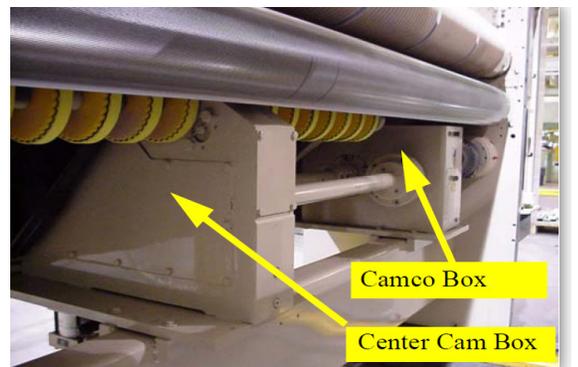

The Heavy Duty Center Box is the heart of the feeder. The center box has been strengthened and beefy 6 pitch gears are used in the internal gear train. The Heavy Duty Center Box upgrade is assembled at the BW Papersystems factory prior to shipment and is a direct replacement.

Upgrade Benefits:

- Stronger internal gears and cam
- Roller bearing used for input and cam shaft eliminating flange bearing
- Provide new connecting shafts between center and index box using locking elements instead of keys
- Redesigned idler gear and mounting assembly for more robust performance

Also Available:

- Keyless timing belt pulley
- New design vacuum box
- Also available as a complete bottom end kit with Camco box
